

Is my CCELL cartridge full?

CCELL wick atomizers are larger than most and absorb liquid well. This is why they produce a lot of vapor!

After our team hand fills the cartridge, the ceramic atomizer inside absorbs liquid over time, priming for your use. The oil is still in the cartridge, it has been absorbed within the atomizer making it invisible to you. Up to 30%* of a .5ML cartridge can be absorbed resulting in "headspace".

Is your cartridge under filled? No. Like a bag of potato chips, the air is essential for proper transport and use of the product.

.5ML CCELL Cartridge
